

BOSS Flow Home

The **BOSS Flow** is a Java framework that provide flow/workflow functionality. It is a lightweight framework very useful for managing web forms. Common example is an e-shop shopping chart that is a common kind of multistep form. Currently the BOSS Flow has been used by its author in two commercial projects and it was a really good idea in both cases.

[Browse Source code](#)

The latest XSD of configuration XML is on <http://wicketstuff.cz/p/boss-flow/boss-flow.xsd>.

See tutorials:

- [1 minute Tutorial](#) shows XML file and three lines of java code necessary to run flow in your application
- [5 minute Tutorial](#) shows full flow example of XML configuration features and java code with annotated methods
- [Online Example Appliation](#)

Browse [Examples Source](#) or download [download examples from maven](#).

See sources on sourceforge.net or download jars, but rather use Maven <http://search.maven.org/#browse|-1932462777>.

Maven Dependency

```
<dependency>
  <groupId>cz.wicketstuff.boss</groupId>
  <artifactId>boss-flow</artifactId>
  <version>1.3.1</version>
</dependency>
```

Report your issue (bug or idea) into [JIRA](#).

BOSS Flow has been created in November 2012 and the first version has been realeased to [Sonatype](#) maven repositories and promoted to the maven central repositories in the end of December 2012. It is licensed by Apache Common 2.0 License, so it is free for use and modification. The BOSS Flow has been started by members of [BOSS Team](#) of the Czech software company, [Etnetera](#).

The framework is built and tested for [Java 7](#), using [Apache Maven](#) as a build tool.

The [Twinstone.org](#) domain is held and used for mixed materials related to opensource projects. Also [Atlassian products](#) has been installed on twinstone.org among the open-source projects as well as [Atlassian offers](#).
