

Infusing Protocol

Every TDI response should be a valid XML document formatted according to Infuse protocol rules. The infuse protocol declares a set of instructions for the client part.

Syntax

```
<?xml version="1.0"?>
<response>
  <status>OK</status>
  <update target replace append prepend class-add class-remove>html/text
contents</update>
  <insert target position>html/text contents</insert>
  <script src>inline js code</script>
  <style src></style>
  <popup mode href width height></popup>
  <reload></reload>
  <redirect href></redirect>
</response>
```

Infusion instructions

- [status](#)
- [update](#) - refresh HTML element content
- [insert](#) - insert new content to the page
- [script](#) - download external JavaScript or perform inline JavaScript
- [style](#) - download external CSS styles
- [popup](#) - open popup window
- [reload](#) - reload the page
- [redirect](#) - redirect to the URL
